

The new OSRAM Eurobox –  
a safe way to increase sales

SEE THE WORLD IN A NEW LIGHT

**OSRAM**

## Your next holiday is just around the corner

And when all your bags are packed there is still one thing you need to take with you – the new OSRAM Eurobox. After all, in many West European countries, such as France, Holland and Spain, and in almost all East European countries you are required by law to carry a set of spare bulbs in your car.

### The OSRAM Eurobox – quality and safety on board.

#### See and be seen

As the days get darker so the importance of light increases. If just one bulb fails then your car becomes a less safe place to be. And if the spare bulb is not from a reliable source, then good night!

Your customers benefit from our experience – and save themselves time, money and stress.

#### Easy to find

The OSRAM Eurobox comes in five universal types for all the car brands. So everyone can find the right bulbs for their car.

#### No shake, rattle or roll

Automotive bulbs are sensitive to bumps and knocks, so OSRAM has made sure they are held firmly in the box. And of course the box is very easy to restock and expand.

#### We've thought of everything

OSRAM thinks of things other would rather forget. The important R5W taillight, for example, is one of the basic stock items in all OSRAM Euroboxes.

#### We've removed all the guesswork

A label tells the customer exactly what the box contains and provides technical data on each of the bulbs. Each bulb is labelled with the ECE category, as prescribed, and is therefore easy to identify. And there is a diagram on the back of the box showing where each of the bulbs is to be used. This is particularly useful in an emergency.

#### Peace of mind

Faulty bulbs are a safety risk. Our Eurobox enables drivers to remedy the situation immediately without having to call out a garage or breakdown service. And that's true all the year round, not just during the holiday season.

## The OSRAM Eurobox – for a safe journey time after time

The OSRAM Eurobox is a particularly fast-selling product for the spare bulb sector of the European automotive market.

- Eye-catching in form, colour and size
- Strong associations: the case design reminds people of holidays and the legal requirement in many European countries to carry spare bulbs
- Impressive high-quality design
- Extremely rugged, with excellent protection for the bulbs
- Transparent and extremely informative
- Easy to stack, hang or place in displays
- Strong label seal to counter theft of the contents
- Available in five different universal types for all the car brands
- Easy for customers to choose because of clear links to specific cars

With so many benefits, the decision is simple. The OSRAM Eurobox is an attractive product. Take advantage, and boost your business.
